UX Final Case Study

NaturCycle

Xiang Yao - INM300SAA

Client Goal

NaturCycle aims to redefine the beauty industry standards by proving that high-quality skincare and environmental responsibility can coexist. Their primary objective is to build a pioneering brand that empowers consumers to care for their skin while actively minimizing their environmental footprint through a closed-loop recycling system.

Our Goal

Our goal was to translate NaturCycle's core values into a cohesive digital identity. We aimed to design a platform that not only communicates the brand's unique selling points—such as their "waste-to-beauty" technology—but also fosters a loyal community of eco-conscious users through an engaging and educational user experience.

Problem Question

How might we help environmentally conscious consumers overcome their skepticism about "recycled beauty" and easily find products that match their specific skin needs?

The Client Challenge

The client struggles with a market saturated by "greenwashing." Consumers often find it difficult to verify sustainable claims or believe that eco-friendly products can be as effective as traditional ones. NaturCycle needs to bridge the gap between environmental impact and personal skincare efficacy.

Assumptive Solution

To address this, we propose integrating data visualization and personalization tools. We assume that by featuring an AI Skin Analysis tool for tailored recommendations and a transparent "Eco-Footprint Tracker," we can build trust and prove that NaturCycle's products are beneficial for both the user's skin and the planet.

Introduction

In a market saturated with "greenwashing," NaturCycle offers authentic sustainability through its unique approach to skincare. This project focuses on designing a dedicated mobile application that serves as a daily companion for the eco-aware consumer, ensuring that every interaction—from browsing to recycling—reflects the brand's commitment to the planet.

Project Overview

The NaturCycle app addresses the challenge of integrating sustainability into daily skincare routines without sacrificing convenience. Our solution offers a seamless platform where users can easily shop for clean beauty products, access educational resources on ingredients, and utilize the brand's unique recycling program. Key deliverables include a validated user flow for waste submission, personalized skin analysis tools, and a high-fidelity prototype that demonstrates how digital tools can drive tangible environmental change.

Project Vision

Anticipated Aims

Seamless Integration: To design an intuitive mobile application that seamlessly merges the e-commerce experience with a physical "Waste Submission" recycling program.

Educational Transparency: To visualize the impact of sustainable choices, educating users on how "recycled ingredients" are safe, effective, and eco-friendly.

Personalized Care: To implement AI-driven features, such as Skin Analysis, offering tailored skincare regimens that overcome the "one-size-fits-all" limitation.

Measurement of Success

Recycling Participation Rate: Tracking the monthly volume of "Waste Submissions" booked and completed through the app.

Conversion & Retention: Measuring the conversion rate from "Guest" to "Subscriber" and the retention rate of the refill program.

User Engagement Metrics: Monitoring active usage of the "Skin Analysis" tool and time spent on educational content pages.

Uncertainties

Adoption Friction: Users may find the physical process of saving, cleaning, and mailing back empty containers too cumbersome despite digital incentives.

Trust & Perception: Consumers might remain skeptical about the efficacy of skincare products derived from "recycled waste," requiring high transparency in the UI design.

Technical Feasibility: Ensuring the mobile-based AI Skin Analysis provides consistent and accurate results across diverse lighting conditions.

Brand Message

Sustainable Beauty, Redefined. NaturCycle bridges the gap between high-performance skincare and environmental stewardship. By turning recycled organic materials into effective beauty solutions, we invite you to join a circular economy where every drop counts.

Vision

A future where skincare restores the planet rather than depleting it.

Mission

To dismantle the trade-off between efficacy and sustainability. We are committed to a zero-waste philosophy, preserving Earth's resources through innovative sourcing, and empowering individuals to make a positive impact with every application.

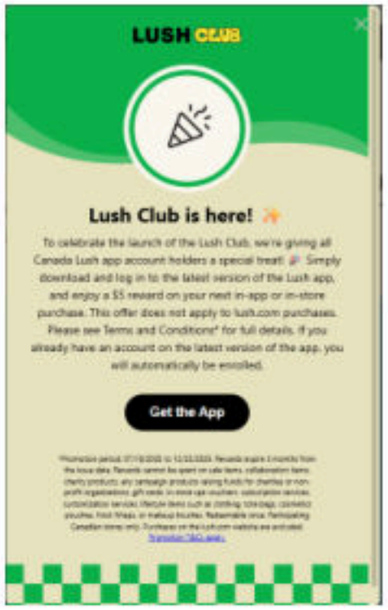
Comparative Analysis

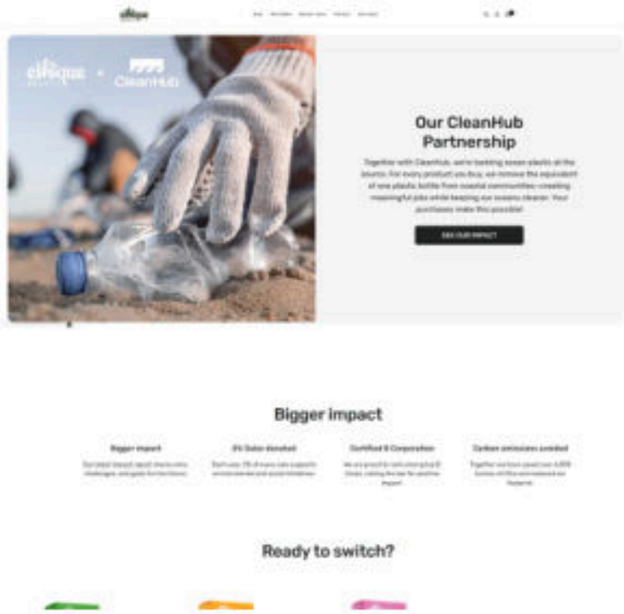
A comprehensive analysis was conducted to evaluate the strengths and weaknesses of key competitors in the sustainable beauty market. By examining industry leaders—Caudalie, Lush, Ethique, and The Ordinary—we identified critical gaps in digital engagement and user experience.

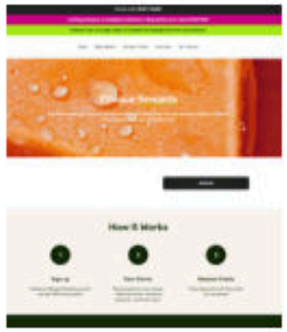
This research serves as the foundation for NaturCycle's strategy, highlighting opportunities to differentiate the brand through transparent impact tracking and a unified digital ecosystem.

Research 1

Comparative Analysis





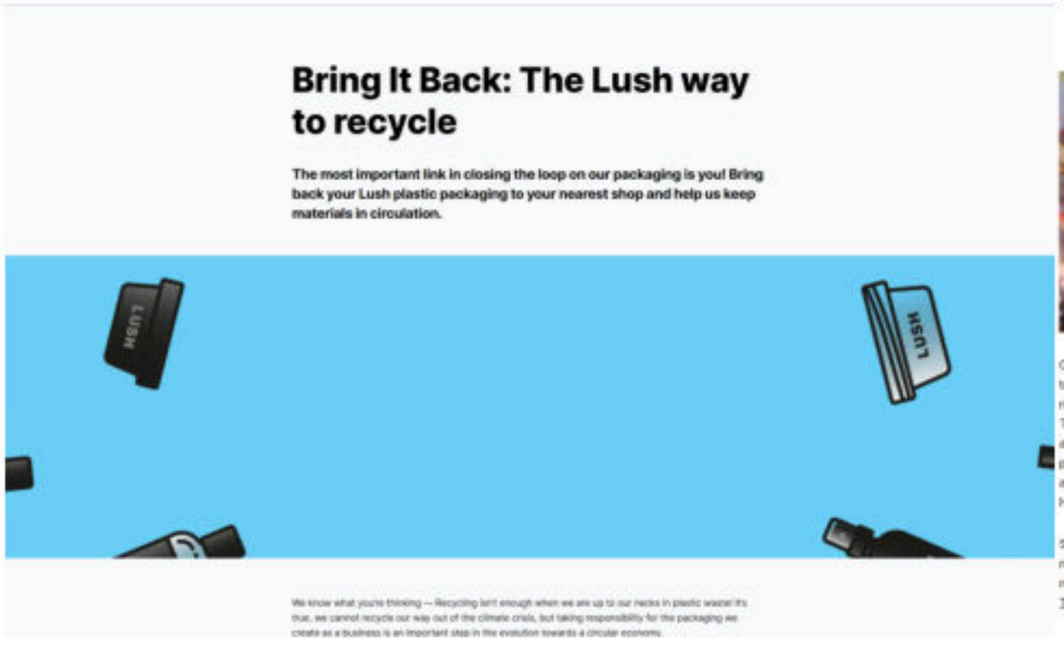


Naked Stores

In 2018 we made our biggest stance yet by opening two naked-only concept stores in Milan, Italy and Berlin, Germany. Every single product sold in these stores was unpackaged. We had all our naked bath products, shampoo and conditioner bars, naked hot oil hair treatments, naked body scrubs and conditioners, naked shower gel, soap, massage bars, washcards, our naked makeup and some exclusive naked products. We pressed our iconic fresh cleansers into coin shapes which customers could take and pop it in their own pot. We also sold packaging that would help our customers store their naked products such as our Knot Wraps and our cork pots, another answer to cutting plastic packaging and replacing it with compostable, water resistant and carbon sequestering cork.

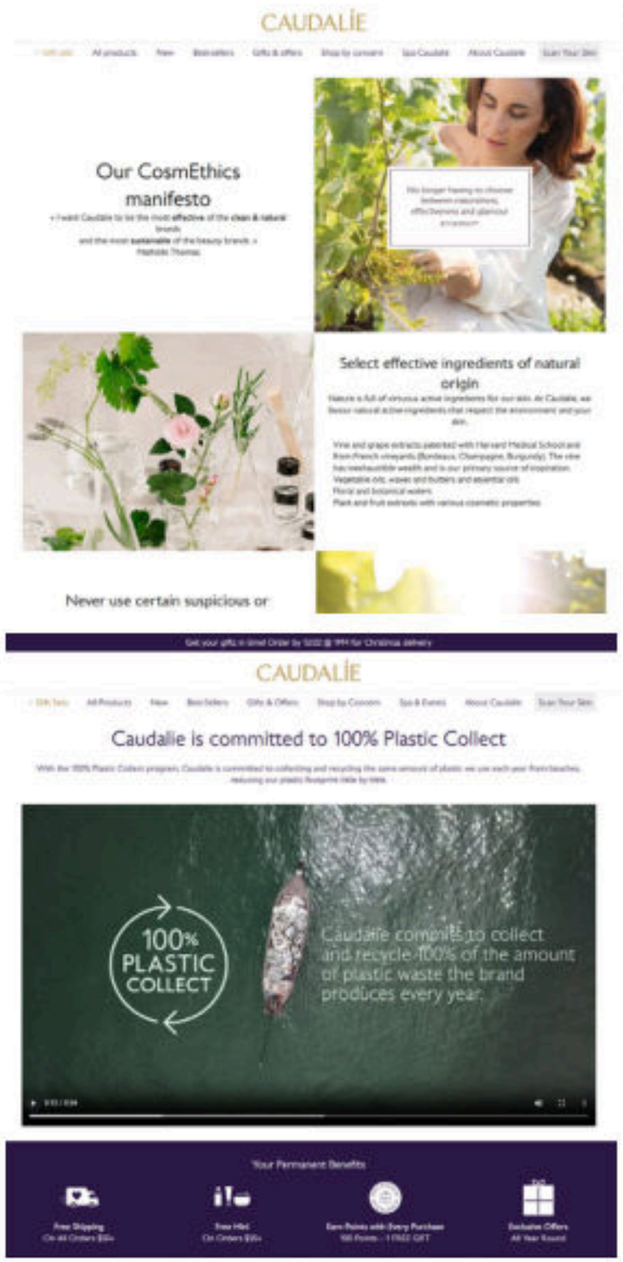
Our Lush Lens technology was launched alongside our naked stores to help customers identify and read about naked products (if you've read the Digital Ethics principle, you know what we're talking about). This digital packaging solution eradicates the need for packaging and signage and we believe it has the potential to revolutionise the packaging industry at large. We continued full steam ahead in 2019 and opened another two naked stores in Manchester, UK and in Hong Kong.

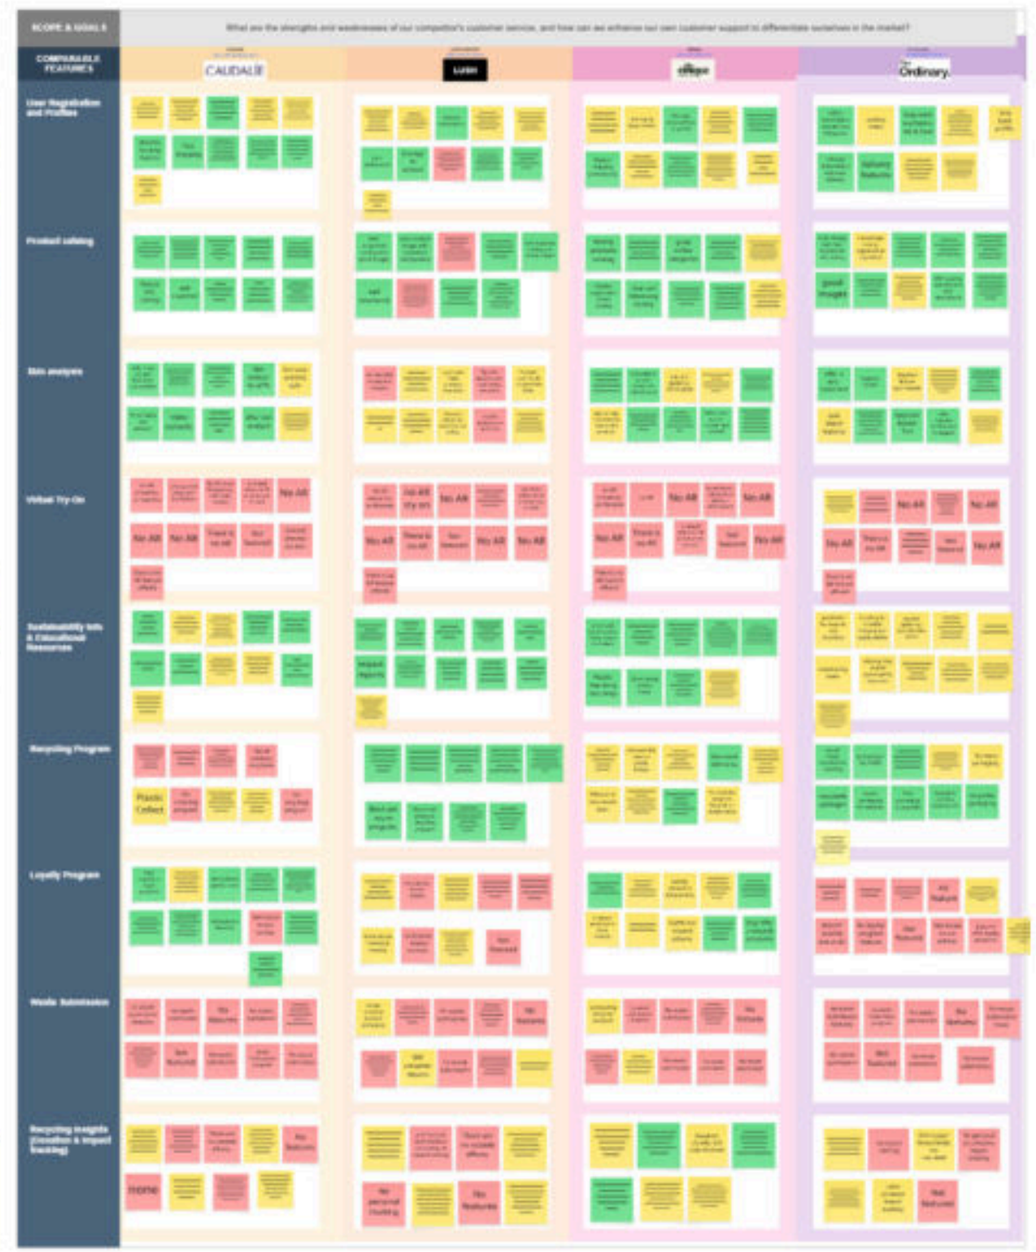
Staff at the opening of the Manchester store volunteered to wear nothing except a black apron that read 'Ask me why I'm naked'. Our naked stores also received the Champion of Sustainability award in The Vogue Beauty Awards in 2019.



Research 2

Comparative Analysis





Comparative Matrix

Success · Standard · Failure

	CAUDALIE	LUSH	ethique	The Ordinary.
User Registration & Profiles	Simple sign-up with "My Caudalie" benefits highlighted immediately. Easy order tracking.	Standard account creation. Functional but lacks social login options in some regions.	Seamless onboarding with a focus on "Plastic-free" mission during sign-up.	Minimalist and quick registration process. Very straightforward interface.
Product Catalog	Well-organized by collection and concern. High-quality imagery with clear ingredient focus.	Visually rich, but the grid can feel cluttered. Hard to filter specific needs quickly.	Clear distinction between hair, face, and body bars. Icons help identify usage quickly.	Organized by complex chemical names (e.g., "Retinol 1%"), creating a high learning curve.
Skin Analysis	Offers a digital "Skin Scanner" and quick quizzes to recommend routine products.	"Lush Lens" scans products for info, but lacks a dedicated skin diagnosis tool.	Simple "Hair & Skin Quiz" available, but no AI/Camera-based analysis features.	"Regimen Builder" quiz exists but is text-heavy and lacks visual interaction.
Sustainability & Education	"Cosm-ethics" page clearly explains banned ingredients and "1% for the Planet" status.	Extensive content on "Naked" products and ethical buying stories. Very educational.	"The Locker" blog provides deep dives into ingredients and plastic-free living tips.	Focuses heavily on clinical formulation science. Lacks dedicated sustainability education.
Recycling Program	Partners with TerraCycle for boutique drop-offs. No digital tracking for users in-app.	"Bring It Back" scheme: Return 5 pots for a free mask. High incentive, mainly in-store.	Home-compostable packaging eliminates the need for a return program entirely.	In-store recycling available in limited locations only. No global, unified digital program.
Loyalty Program	"MYCAUDALIE" points earned for purchases and recycling. Clear tiers and rewards.	No traditional loyalty points system. Lacks retention gamification features.	"Ethique Rewards" allows earning points for referrals, reviews, and purchases.	No traditional points-based loyalty program available.
Recycling Insights & Impact	Mentions trees planted, but lacks a personal user dashboard for impact tracking.	"Charity Pot" product directly links purchase to donation. Strong ethical storytelling.	Visual counters on site: "Plastic bottles saved" & "Trees planted". Very motivating.	Does not provide visibility on environmental impact or donation tracking.

Personas

Personas are semi-fictional archetypes based on our research data, representing the needs, goals, and behavioral patterns of NaturCycle's target audience.

By analyzing these profiles—from the Assumptive stage to the Validated stage—we gain a deeper understanding of our users. This empathy-driven approach ensures that our design solutions bridge the gap between sustainable values and everyday convenience.

Hair salons across the United States and Canada are increasingly adapting material recycling and sustainable practices. However, 70 percent of salon professionals are unaware of recycling streams and ways to reduce waste, according to a new study from Green Circle Salons.

The Certified B corporation released a report titled "The Circle of Impact," which detailed the state of the hair salon industry regarding environmental impact and the "attitudes" of salon professionals towards sustainability.

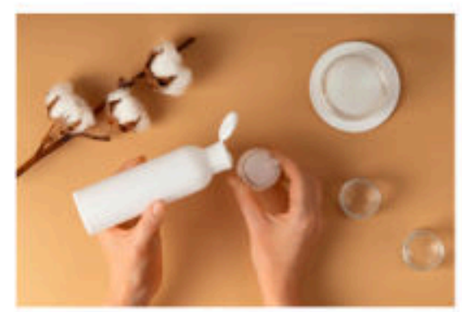
CANADIAN COMPANY SEES THE BEAUTY IN REDUCING SALON WASTE

Refillable beauty packaging statistics and trends



- The global **refillable packaging** market will be worth **USD 47.49 billion in 2025**, rising to **USD 62.60 billion by 2030** at a **5.7% CAGR**.
- **61% of shoppers** say sustainability, including packaging, influences purchase decisions, and **79%** are more likely to buy when a product is clearly labelled refillable.
- The **refillable deodorants** market will grow from **USD 206.79 million in 2025** to **USD 305.60 million by 2032**.
- The beauty industry produces **≈120 billion packaging units every year**, and **95% are discarded after one use**.
- EU Regulation (EU) 2025/40 requires **all packaging to be reusable or recyclable by 2030** and sets a **5% per-capita packaging waste reduction target** for 2030, accelerating refill adoption.

1. The scale of the packaging problem

The beauty sector's waste footprint is huge: up to **120 billion pieces of packaging** are produced annually, much of it small, complex and hard to recycle. Research for the British Beauty Council shows **95% of cosmetic packaging ends up as waste** British Beauty Council. This backdrop explains the regulatory and consumer push towards refill and reuse models.

PAINS

Inconsistent or vague sustainability data from suppliers.
Extra workload from managing eco-reporting.
ools made for big companies, not small salons.

NEED TO DO

Investigate environmental impact
Provide credible recommendations
Select transparent suppliers

GAINS

Feels proud leading by example in sustainability.
Sees proof that green practices can be profitable.
Feels fulfilled seeing real eco-impact data.

User Flow

A user flow visualizes the path a user takes through the NaturCycle application to achieve their goals, such as purchasing skincare or submitting waste for recycling.

By refining this journey—from the initial Assumptive flow to the final Validated version based on user feedback—we identify friction points and optimize the navigation for a seamless, intuitive experience.

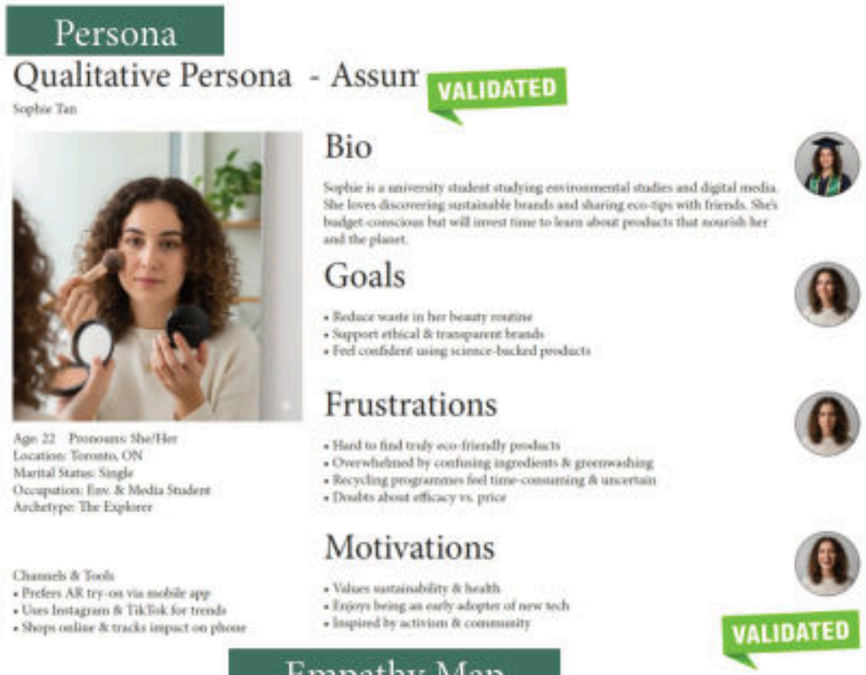
User Journey Research

Interview

- What information do you look for first when evaluating a product's sustainability?
- Does this product page give you enough details to trust its sustainability claims?
- What additional information would help you feel more confident?
- Does anything here feel vague or not entirely convincing to you?
- What signals would help you trust this product more?
- What kind of data would your clients typically ask you about?
- How well does this layout support your decision-making as a professional?
- How quickly were you able to find the information you needed?
- Where did your attention naturally go first on this page?
- What would make this page more useful for your professional needs?
- What information did you expect to see but couldn't find?

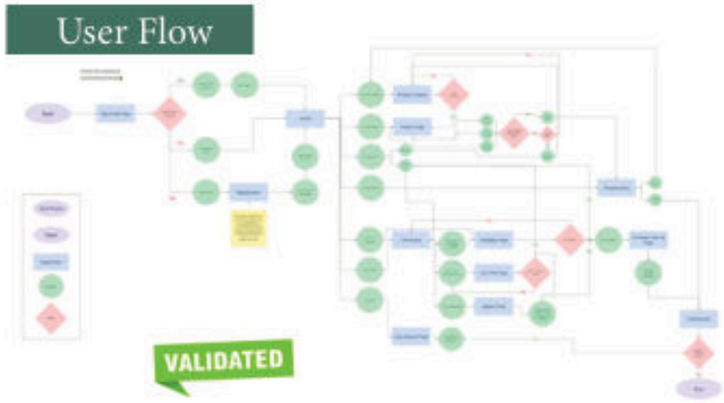
Comparative Matrix

Persona

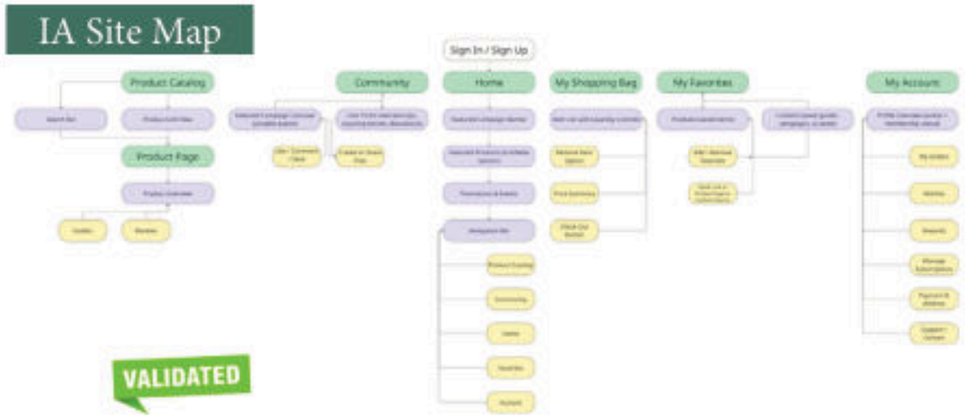


Empathy Map

User Flow

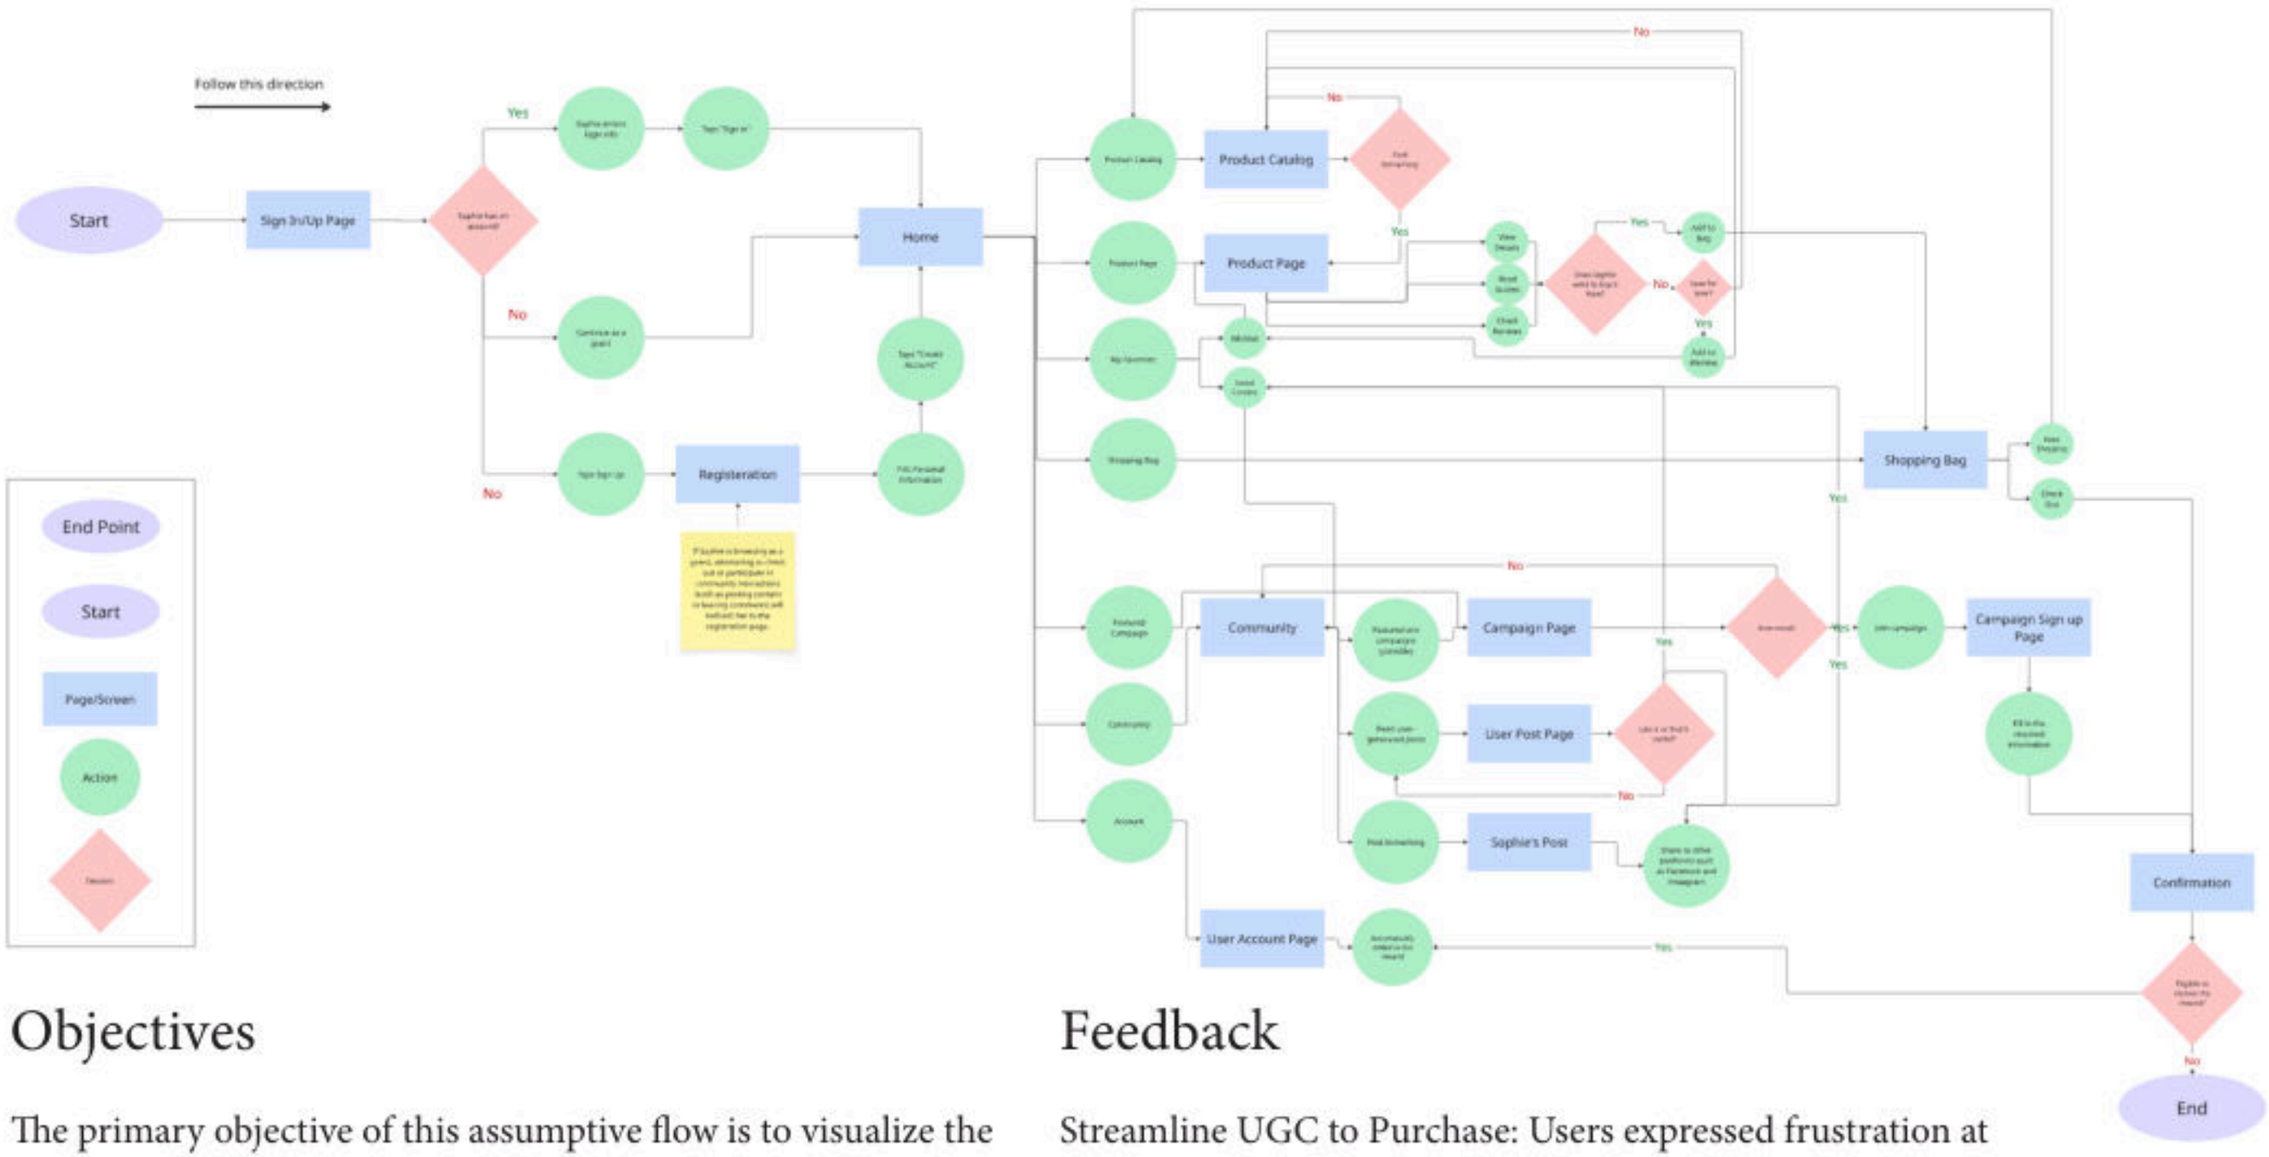


IA Site Map



User Flow -Assumptive / Qualitative

Goal: To explore and purchase sustainable skincare products while learning about their environmental impact and contributing to NaturCycle's recycling program.



Objectives

The primary objective of this assumptive flow is to visualize the user's journey from community engagement to product conversion.

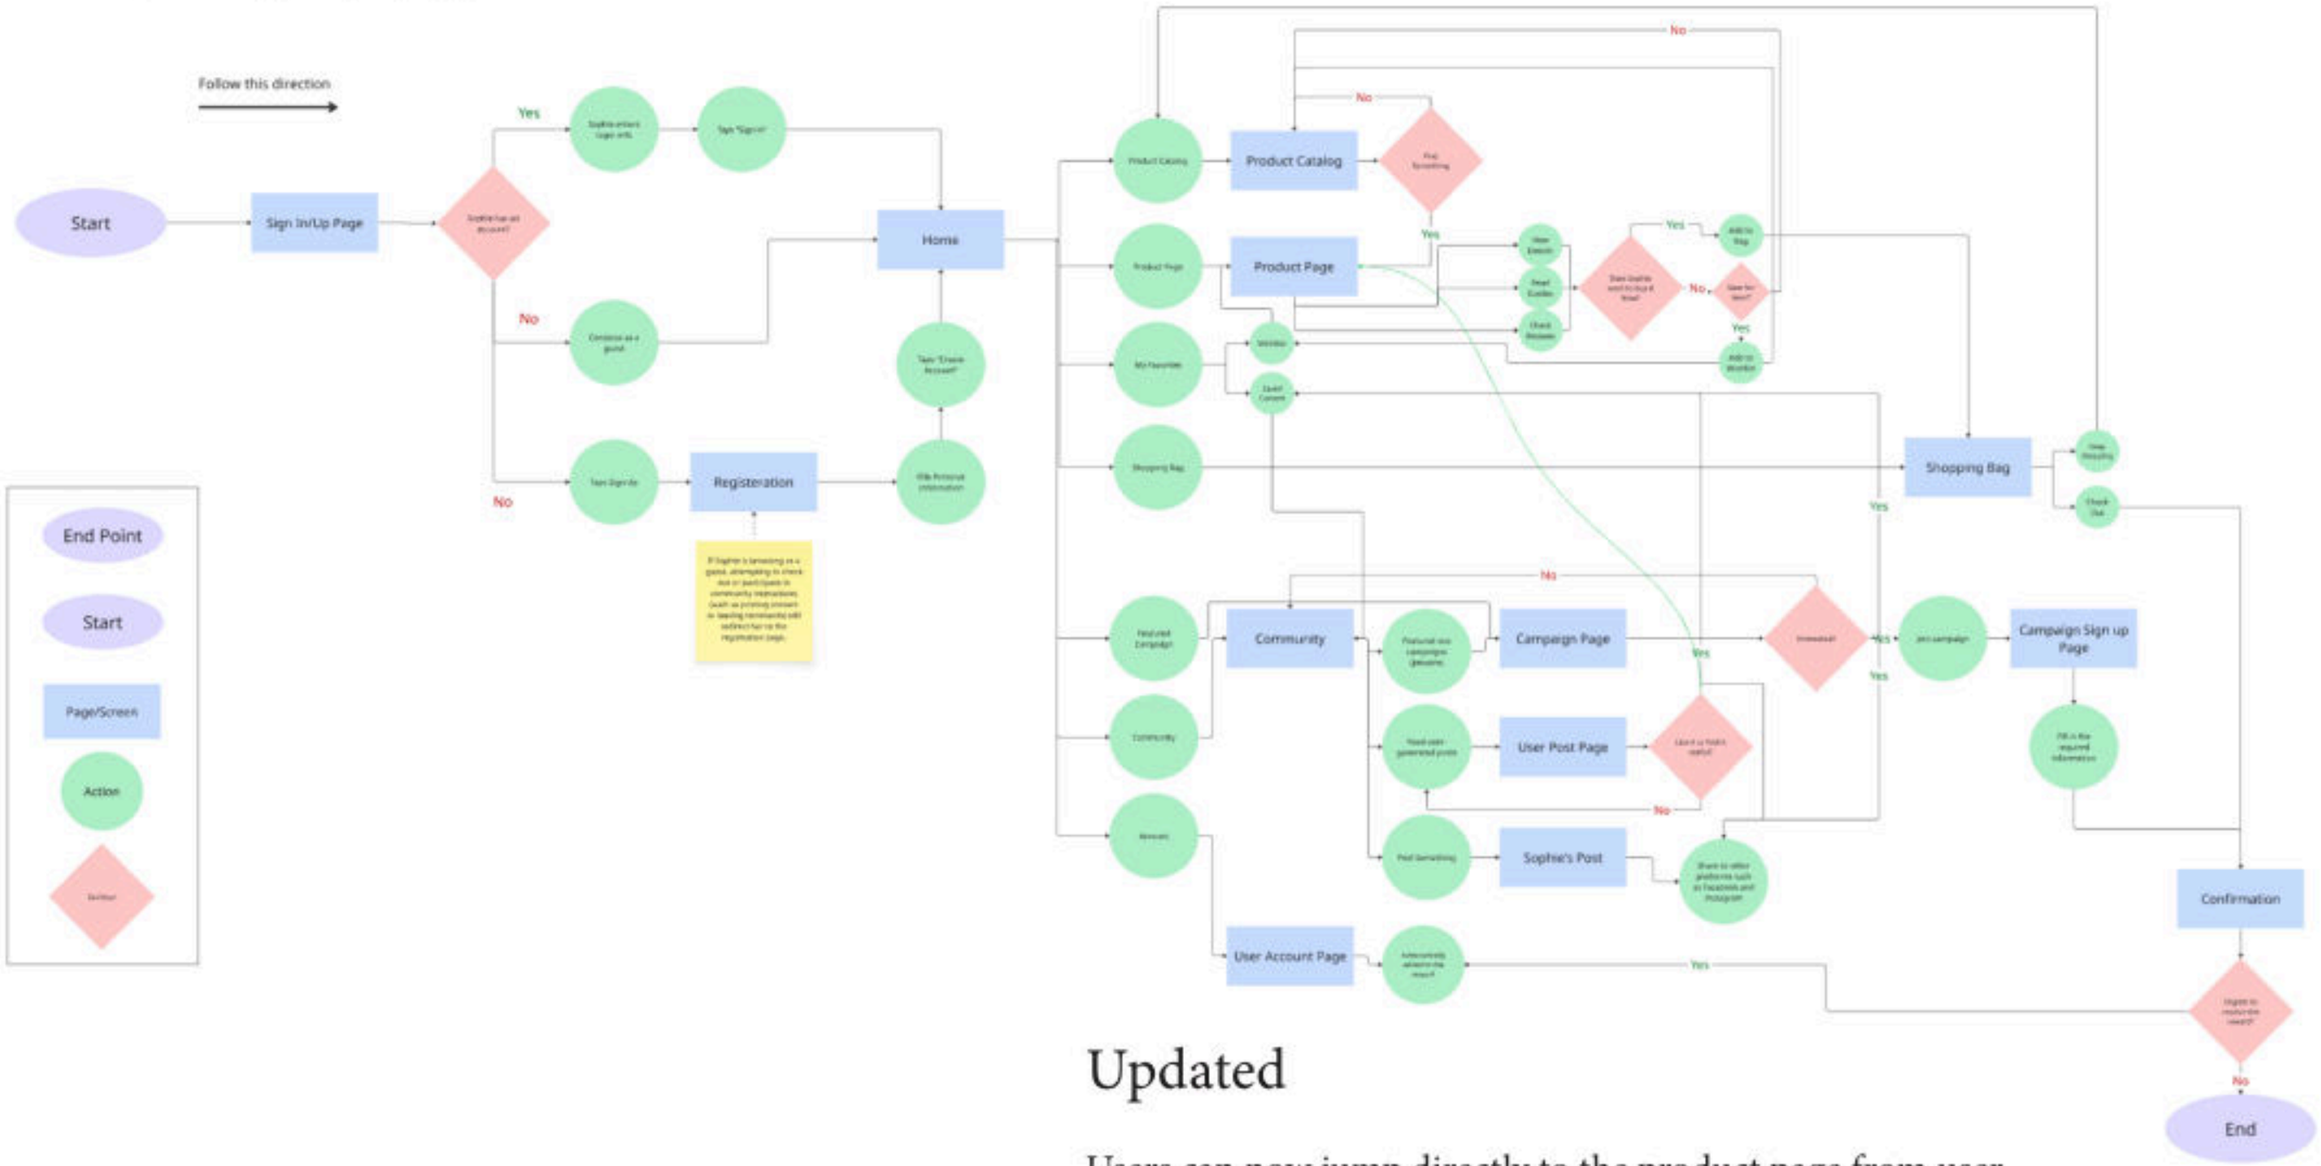
It hypothesizes that users will discover products through social interactions and seeks to validate whether the current navigation effectively bridges the gap between "browsing content" and "making a purchase."

Feedback

Streamline UGC to Purchase: Users expressed frustration at having to manually search for products they saw in photos. They strongly requested a feature to click directly from community UGC posts to the specific product page for immediate purchase.

User Flow -Validated / Qualitative

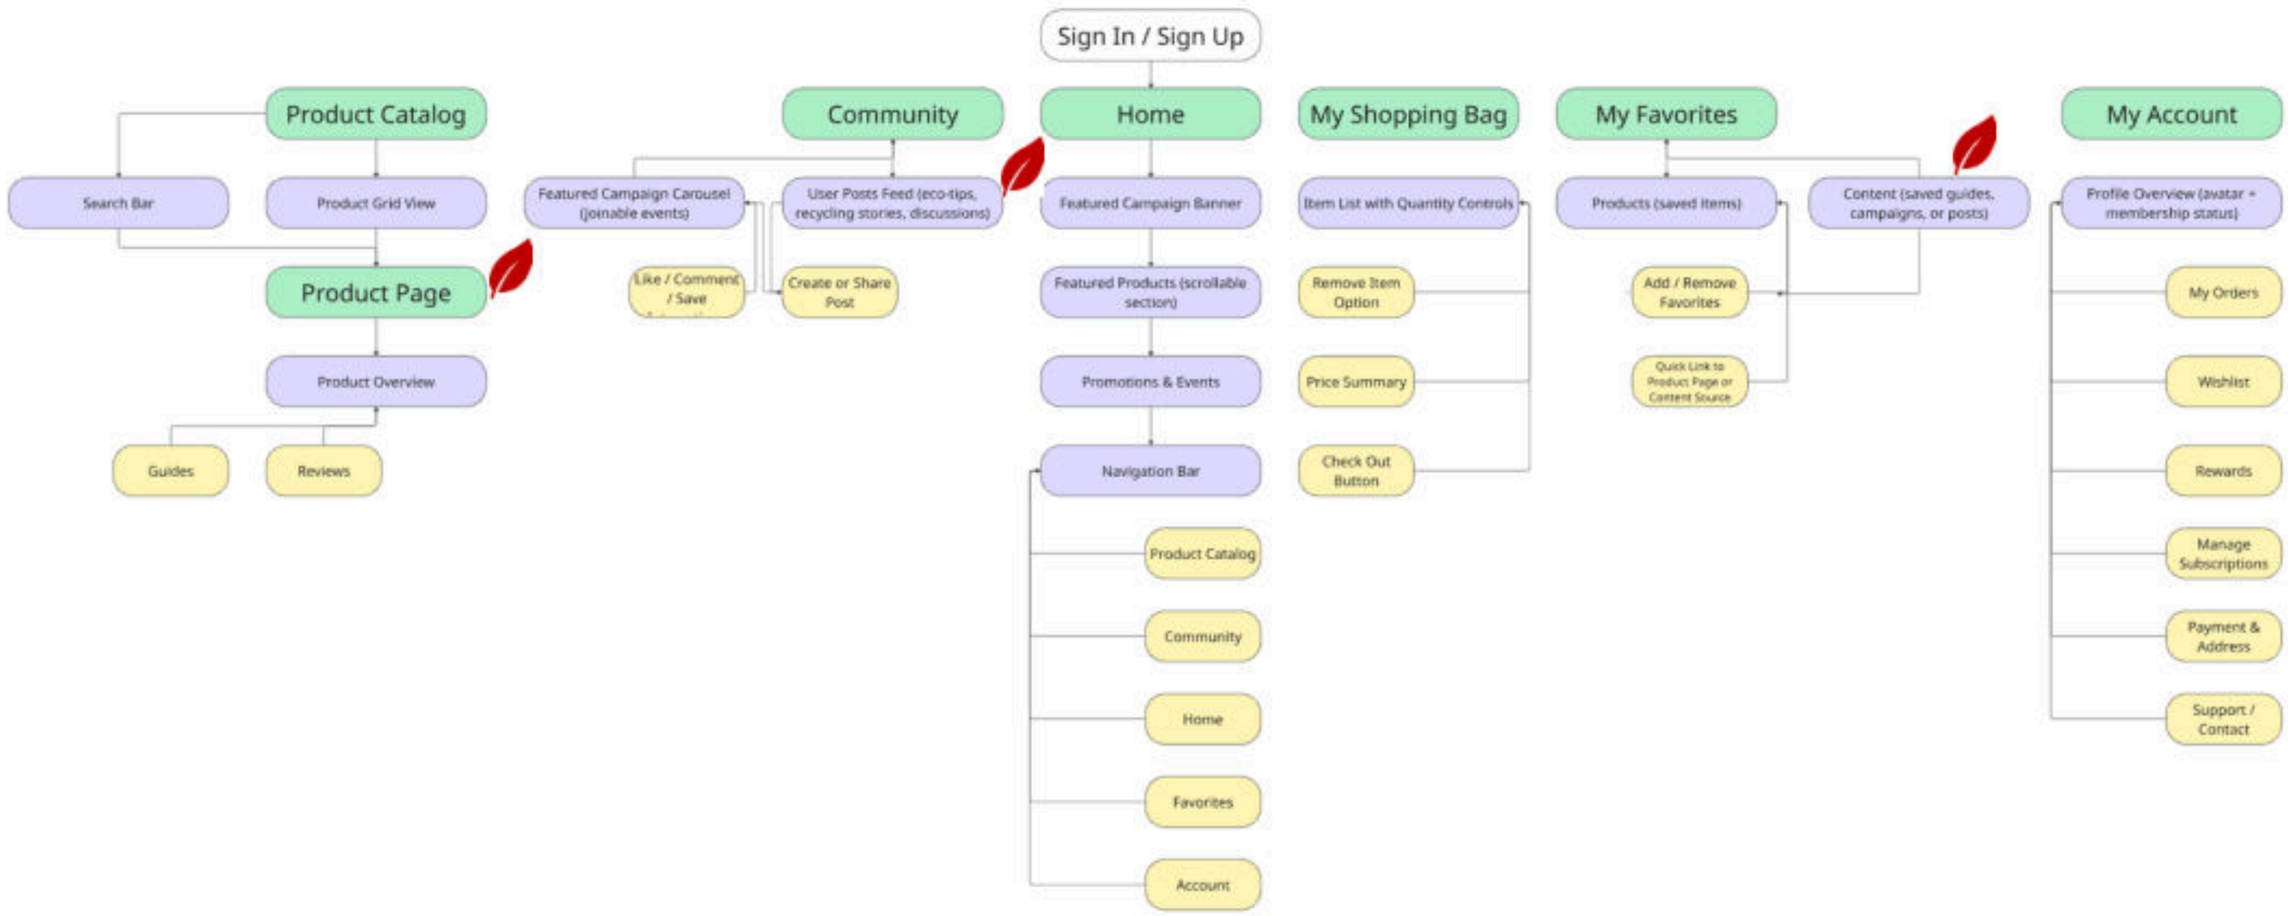
Goal: To explore and purchase sustainable skincare products while learning about their environmental impact and contributing to NaturCycle's recycling program.



Updated

Users can now jump directly to the product page from user shares and posts within the community.

IA Site Map



Considerations

Bridging Content & Commerce: The architecture is designed to create seamless pathways between the Community feed and the Product Catalog. This ensures that user engagement naturally leads to conversion opportunities without disrupting the browsing experience.

Intuitive Navigation: This IA structure organizes complex functionalities—shopping, recycling, and socializing—into distinct yet interconnected hubs. The goal is to minimize cognitive load and allow users to locate key features within 3 taps.

Prioritizing Core Values: Key features like the Recycling Program and Skin Analysis are elevated in the hierarchy to align with NaturCycle's mission of sustainability and personalization.

User Journey Map

Stage	AWARENESS	EXPLORE	DISCOVERY	VALIDATION	SELECTION	PURCHASE	COMPLETE
USER FLOW	Downlaod, Login	Home, Catalog	Commu-nity, Tags	Posts, UGC Reviews	Add to Fav, Add to Chart	Cart, Checkout	Receive Item, Create Post
GENERAL ACTIVITIES	Opens the app during free time to browse latest trends or check their skin analysis rewards.	Browses the general product catalog but feels overwhelmed by too many options. Unsure what fits her needs.	Switches to the Community tab to see what real users with similar skin types are using.	Finds a relatable "Routine" post, reads the authentic feedback, and trusts the user's recommendation.	Uses the direct link on the post to view the product details and adds it to the cart immediately.	Reviews the order details, selects a sustainable delivery method, and completes payment.	Receives the product, feels satisfied, and posts an "Unboxing" photo to earn points.
TOUCH POINTS	Home Screen Notification Face ID	Home Banner Product Grid Category Menu	Community Tab Skin Type Tags Search Bar	User Avatar UGC Photos Comment Section	"Shop This Look" Link Product Page "Add to Cart" Btn	Shopping Bag Payment Info	Packaging "Write Review" Btn Camera
EMOTIONAL STATES	Habitual (Routine check)	Unsure (Overwhelmed)	Relieved (Finding help)	Inspired (Trust built)	Confident (Decision made)	Satisfied (Task done)	Fulfillment (Part of tribe)
OPPORTUNITIES	Use personalized "Welcome Back" messages or badge notifications to increase engagement	Add a "Trending Now" section in the catalog to guide undecided users.	Personalization: Auto-filter community posts based on the user's skin profile.	Social Proof: Highlight "Verified Purchase" badges on community reviews to increase trust.	Key Feature: Ensure the "Shop Item" tag overlays clearly on UGC images for 1-click access.	Auto-fill shipping info for members to reduce friction during checkout.	Gamify the experience: "Post your unboxing to earn 50 Eco-Points."

Wireframe

A wireframe is the architectural blueprint of the NaturCycle application. It strips away visual design to focus purely on layout, information hierarchy, and functionality.

This process evolved from rapid hand-drawn sketches to refined digital structures, ensuring that the navigation flows logically before any color or styling is applied.

Eight-Minute Speed Sketches

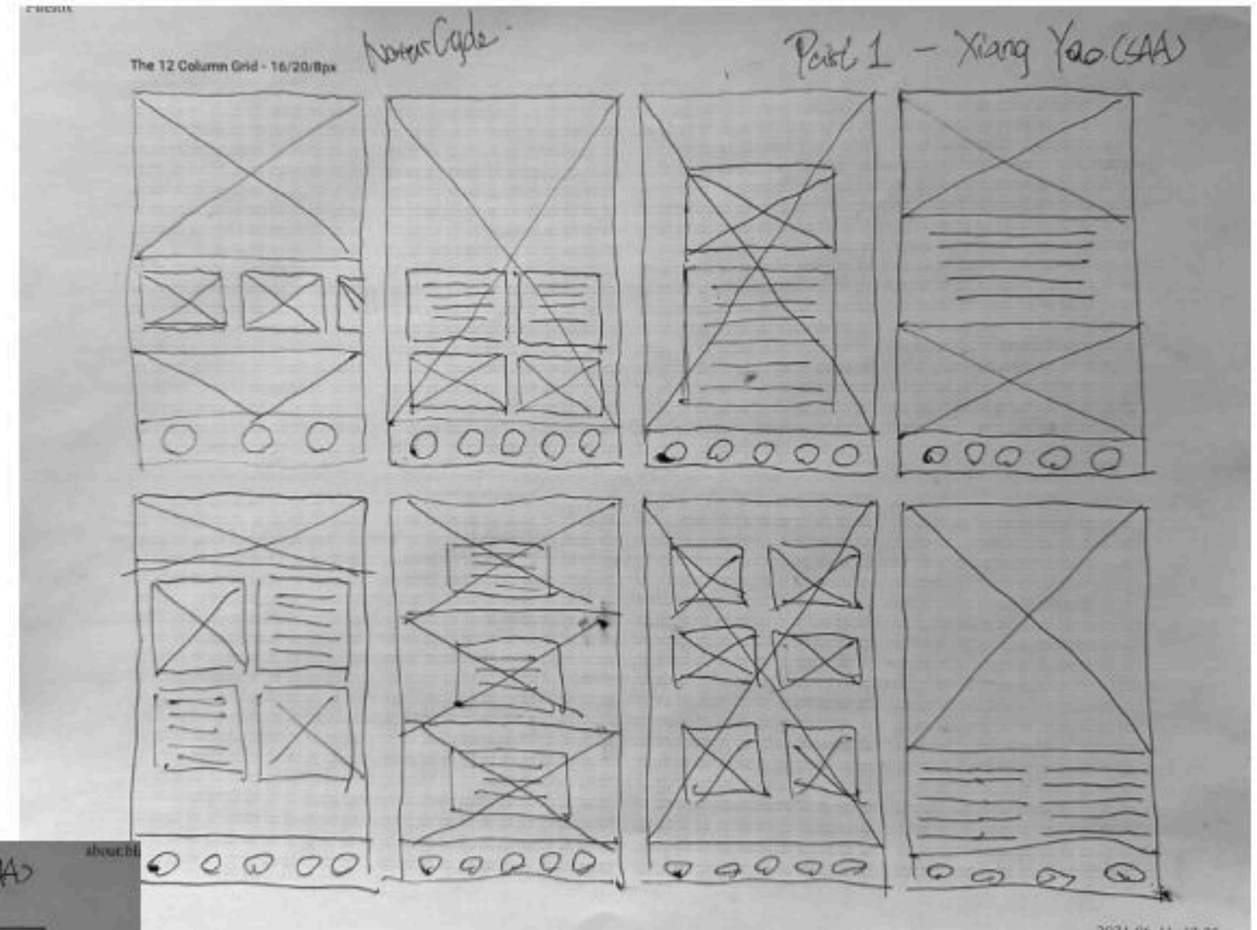
The design process began with eight quick concept sketches completed within a total of eight minutes.

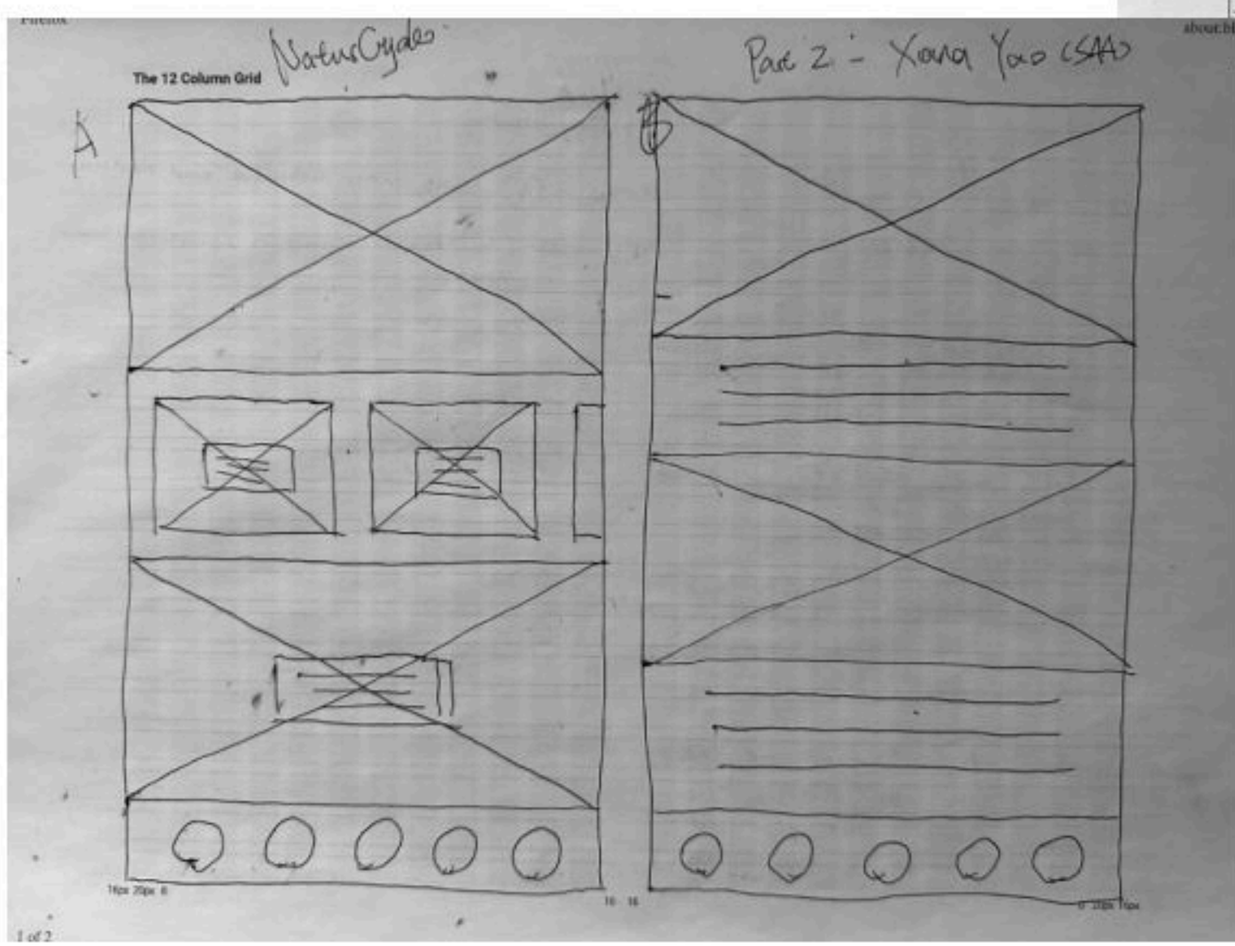
This phase was purely exploratory and focused on idea generation rather than refinement or feedback.

Each sketch represented a different approach to the Home Page layout, experimenting with how campaigns, featured products, and navigation could coexist within a balanced, mobile-friendly structure.

Some sketches emphasized visual storytelling through large hero banners, while others explored modular grids and denser content blocks.

The goal was to test composition and hierarchy through rapid iteration — to visualize multiple ideas quickly before narrowing down.





A/B Testing

After reviewing the eight sketches, two concepts — labeled A and B — were chosen for further refinement.

This step focused on self-analysis and comparison, identifying which structures could best evolve into functional wireframes for testing.

Concept A presented a clean, narrative-driven composition with a large campaign banner at the top, featured product modules in the middle, and clear bottom navigation. It conveyed openness and a strong sense of storytelling.

Concept B leaned toward a denser layout with more product listings visible per screen, prioritizing efficiency over atmosphere.

Both were retained as potential directions — one emphasizing emotional clarity (A), the other informational density (B) — to be validated in the next round of peer feedback testing.

Peer Evaluation Outcome

During peer testing, participants compared both versions in terms of readability, engagement, and alignment with the brand message.

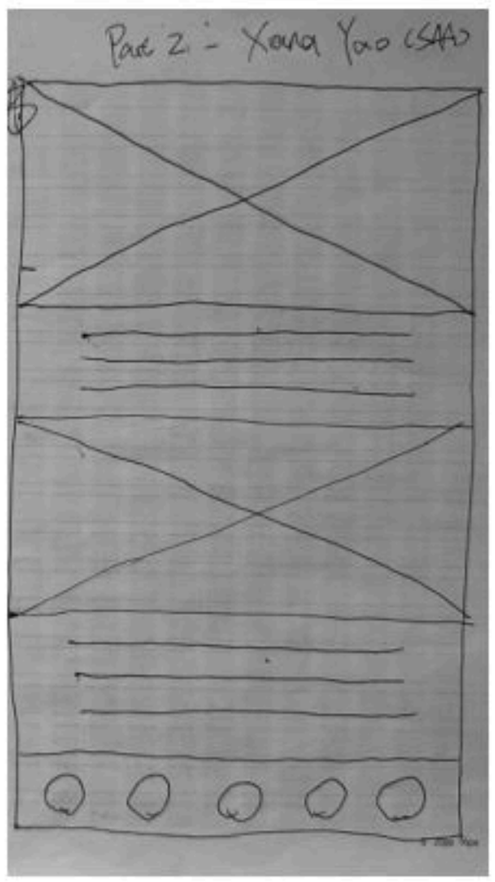
While Version B was recognized for its functional clarity, most users preferred Version A for its spacious layout, balanced rhythm, and immersive storytelling flow.

They described Version A as:

"more peaceful, more natural, and easier to follow."

Participants also noted that the scrolling progression in A — from large imagery to smaller components — created a sense of narrative unfolding, similar to browsing through a curated magazine.
In contrast, Version B's compressed composition felt transactional, lacking emotional buildup.

Based on these findings, Version A was selected as the final Home Page structure.
It successfully expressed NatureCycle's brand identity — slow, intentional, and inspiring — while maintaining usability and functional efficiency.



Story-Driven & Hierarchical

Version A focused on visual storytelling and hierarchical clarity.

It opened with a large hero banner that visually introduced the featured sustainability campaign, followed by a two-column product showcase and a promotional block near the bottom.

This sequence created a rhythmic scroll from awareness to exploration and finally to action.

- Strong narrative continuity, giving users a clear sense of "what the brand stands for" before showing products.

- Large imagery created visual breathing space, enhancing emotional resonance.

- Clear segmentation between campaign, featured items, and events reduced cognitive load.

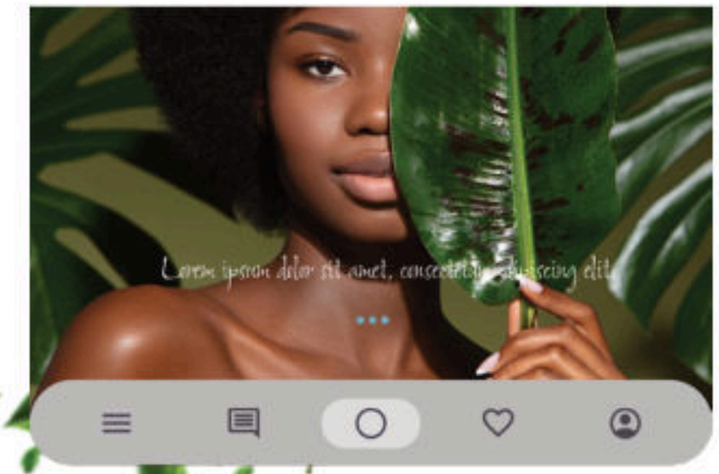
Prototype

A prototype is a high-fidelity, interactive simulation of the NaturCycle application. It brings the static designs to life, allowing stakeholders and users to experience the actual flow and functionality.

This final deliverable serves as the validation ground for complex features like Waste Submission and Skin Analysis, ensuring a seamless user experience before development begins.

https://www.figma.com/proto/sIZ-E7sIE4DpSQ1Keys86D7/NatureCycle_Wireframes?node-id=42-661&t=IzvJll-4t55HXsBPI-0&scaling=scale-down&content-scaling=fixed&page-id=0%3A1&starting-point-node-id=17%3A688



Reflection

This comprehensive case study has been a transformative experience, bridging my theoretical knowledge with practical UX/UI application.

Mastering the Process With no prior background in sustainable tech, researching competitors like Ethique and Lush was eye-opening. It taught me how to analyze market gaps and translate them into digital opportunities. The process of creating Personas and Empathy Maps was crucial; it guided my wireframing process and ensured every screen had a purpose tailored to the user's goals.

Overcoming Challenges The biggest challenge was structuring the Information Architecture (IA) to balance content-rich educational resources with a streamlined shopping experience. Iterating on the User Flow helped me solve this by creating distinct yet interconnected hubs for "Shop" and "Community."

Conclusion This journey highlighted the importance of continuous evaluation. I am excited to apply these research-backed design principles to create even more intuitive and impactful experiences in the future.
